# About AtliQ Mart

AtliQ Mart is a retail giant with over 50 supermarkets in the southern region of India. All their 50 stores ran a massive promotion during the Diwali 2023 and Sankranti 2024 (festive time in India) on their AtliQ branded products.

Now the sales director wants to understand which promotions did well and which did not so that they can make informed decisions for their next promotional period.

# Promotion-level Analysis

## Q1. How do two campaigns compare side-by-side?

The ***Sankranti*** campaign contributed to a notable increase in units sold; however, it was the ***Diwali*** campaign that propelled revenue to nearly double during its time.

Undoubtedly, the ***Diwali*** campaign played a pivotal role in bolstering the financial performance of the business, thereby yielding superior results when juxtaposed with the ***Sankranti*** campaign.

## Q2. What are the top 2 promotion types that resulted in the highest Incremental Revenue?

In assessing the effectiveness of promotion types, it was observed that only '**500 cashback**' and '**BOGOF**' initiatives generated positive incremental revenue.

Hence, '**500 cashback**' and '**BOGOF**' are the promotional types yielding the highest incremental revenue.

### Q3. What are the bottom 2 promotion types in terms of their impact on Incremental Sold Units?

While the `**25% OFF**` promotion had adverse effects on the business, leading to a decrease in incremental units sold, the `**50% OFF**` promotion enabled a substantial increase in units sold by 32.63%

## Q4. Is there a significant difference in the performance of discount-based promotions versus BOGOF or cashback promotions?

Despite being the third highest in terms of volume among the five promotion types, the product featured in the '**500 Cashback**' promotion garnered the highest revenue. This can be attributed to its significantly higher price compared to other products (being the costliest). Consequently, a substantial revenue gap exists between the '**500 Cashback**' promotion and other promotion types.

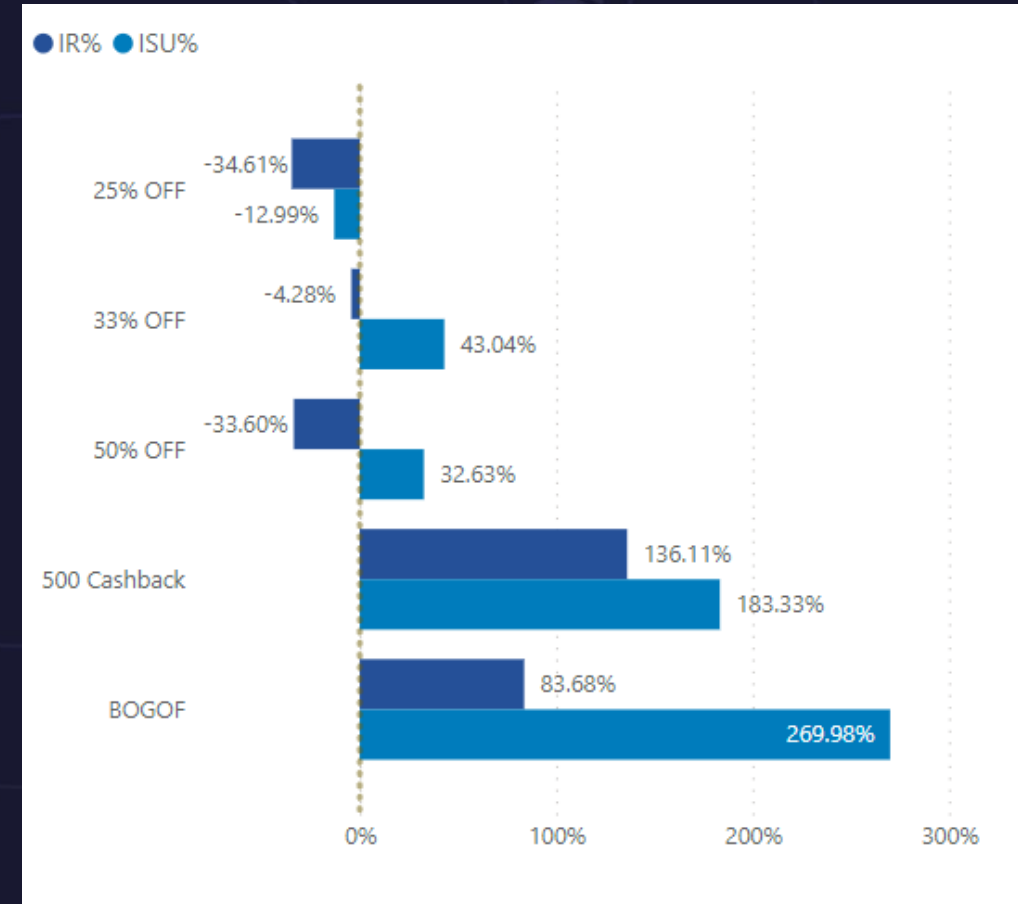

## Q5. Which promotions strike the best balance between Incremental Sold Units and maintaining healthy margins?

As the objective of promotions is to enhance sales for the business, if the Incremental Sold Units (ISU) undergoes a significant increase without a proportional rise in Incremental Revenue (IR), it adversely affects the overall revenue.

Among the promotions assessed, '**500 Cashback**' stands out as the only one achieving a delicate equilibrium between increasing ISU while simultaneously maintaining healthy margins.

# Product-level Analysis

## Q1. Which product categories saw the most significant lift in sales from the promotions?

The `**Combo1**` category experienced a significant surge in sales, nearly tripling the units sold and increasing revenue by almost 2.5 times, owing to the `**500 Cashback**` promotion. Following closely behind is the `**Grocery and Staples**` category, which also exhibited considerable sales growth.

## Q2. Are there specific products that respond exceptionally well or poorly to promotions?

Product that responded exceptionally well

## Q2. What is the correlation between product category and promotion type effectiveness?

In all three offered categories, **`BOGOF`** demonstrated strong performance, whereas **`25% OFF`** consistently underperformed even impacted the business to some extent.

The promotion **`500 Cashback`** emerged as the most successful among them.
